

Functional Capacity Evaluation (FCE)

A functional capacity evaluation (FCE) is a comprehensive standardised assessment, which is administered to evaluate the extent to which a client's physical, psychosocial or cognitive symptoms may be affected by his/her injury or illness. As part of the assessment process, the client's specific work requirements are analysed and compared to his/her abilities. As experts in this field, we offer advice and recommendations to facilitate return to work.

Our therapists are trained to perform:

- Physical FCE's using the WorkWell
- Psychological FCE's using the Psychiatric Functional Capacity Evaluator (PFCE) which is a web-based tool designed to support a standardised approach in the assessment of work-related impairment of psychiatric conditions.
